

For Immediate Release

Mobile Filtration Trailer Hits the Road to Showcase New Suspended Solids Management System Technology

Midland, Mich. (Dec. 20, 2023) – [Accelerated Filtration, Inc.](#), the design and manufacturing firm behind the innovative VelRay X™ suspended solids management system, is partnering with [Eximius Environmental Solutions](#) on a unique mobile filtration trailer that will showcase the power, portability and efficiency of this groundbreaking technology.

After meticulous development and successful testing in the U.S., Accelerated Filtration is now ready to introduce its innovative system to customers throughout North America. The unit is a filter-concentrator that addresses the pain range between water filtration and dewatering faced by high-volume water users.

“We’re focused on helping you manage your toughest difficult water challenges,” said Accelerated Filtration Co-founder and CEO, Scott Burr, Ph.D. “The VelRay X™ is the only suspended solids management solution that is scalable to your needs, operates automatically and is economical.”

Accelerated Filtration has revolutionized the fine particle filtration industry with the VelRay X™ technology. The system addresses how water flows through its filtration process, enabling it to manage a high variability of suspended solids in water with speed and reliability, all while eliminating the need for single-use consumables. This not only adds to sustainability but also enhances safety and overall efficiency.

“This technology transforms what is typically a challenging process into a seamless turnkey solution,” said Terry Wollin, Eximius President and Founder. “The VelRay X™ requires minimal maintenance and provides unparalleled flexibility to address diverse operational needs and overcome challenging water streams. And with its mobility and simple setup, the VelRay X™ trailer delivers quick and clear results.”

The mobile filtration trailer, equipped with VelRay X™ units, is designed for flexible deployment, serving as your suspended solids management system. Interested parties can lease the trailer for filtration needs in various locations, and individual units are available for purchase to accommodate both mobile and permanent operations.

If you would like to secure the opportunity to implement this game-changing solution at your site, you can contact Eximius representatives by [clicking here](#).
